Name: Gianne Mathew U. Uy
Section: CPE11S4

- **Answer the following questions in 3-5 sentences and expound your answer. Submit your answer in a PDF file format.**

1. **Do you think an engineer should also be good in written communication? Why? Explain and justify your thoughts.**

- I do believe that an engineer should also be good in written communications as engineering is not only about solving technical problems. Engineers might also need to write reports, proposals, instructions, emails, and other documents that must be clear and easy to understand. Even if an engineer has great technical skills, poor writing may cause confusions or mistakes in a project. Good written communication allows engineers to explain their ideas professionally and effectively.

2. **How would you differentiate oral communication from engineering graphical communication?**

- The main difference between the mentioned types of communications are based on how they relay their message. Oral communication typically uses spoken words to explain ideas, give instructions, discuss problems, and coordinate with other people. Engineering graphical communication, on the other hand, may use drawings, diagrams, symbols, dimensions, and other visual representations to relay information. But I do believe that both are important for engineers as they often need to explain a design verbally while also showing its technical details through drawings.

3. **As a future engineer, how would you justify the popular phrase "Communication is the key" in the workplace?**

- As an aspiring engineer, I believe that “Communication is the key” because engineering work often involves teamwork and cooperation with different people. Through communication, each of the team members can present their ideas until the team arrives at the best possible solution for a certain problem. Clear communication can also help everyone understand their responsibilities, project requirements, and deadlines. No matter how skilled an engineer is, being unable to communicate effectively can make it difficult to work successfully with others.
